**Climate Change in the Middle East and North Africa** William R. Thompson, Leila Zakhirova, 2021 Environmental factors in the Middle East and North Africa (MENA) have played a crucial role in the historical and social development of the region. The book delves into a broad set of historical literature from the past 15,000 years that neglected to consider environmental factors to their full effect. Beyond the broad historic analysis, the chapters derive conclusions for today's debate on whether climate change leads to more social conflict and violence. Introducing a theoretical framework focused on adaptive cycling, this book probes and refines the role of climate in ancient and modern political-economic systems in the MENA region. It also underscores just how bad the 21st-century environment may become thanks to global warming. While the MENA region may not survive the latest onslaught of deteriorating climate, there is also some interest in how a region that once led the world in introducing all sorts of innovations thousands of years ago has evolved into a contemporary setting characterized by traditional conservatism, poverty, and incessant strife. Emphasizing regional dynamics, the book's central question deals with the role of climate change in the rise and decline of the MENA region. The book will be a key resource to students and readers interested in global warming, including academics and policymakers.

**Shock Waves** Stephane Hallegatte, Mook Bangalore, Laura Bonzanigo, Marianne Fay, Tamaro Kane, Ulf Narloch, Julie Rozenberg, David Treguer, Adrien Vogt-Schilb, 2015-11-23 Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

*Impacts of Climate Change on Human Health in the United States* US Global Change Research Program, 2018-02-06 As

global climate change proliferates, so too do the health risks associated with the changing world around us. Called for in the President's Climate Action Plan and put together by experts from eight different Federal agencies, *The Impacts of Climate Change on Human Health: A Scientific Assessment* is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration Impacts of extreme events on human health Vector-borne diseases Climate impacts on water-related Illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and charts. Learn what health risks face you and your family as a result of global climate change and start preparing now with *The Impacts of Climate Change on Human Health*.

*Migration, Environment and Climate Change* Frank Laczko, Christine Aghazarm, 2009 Gradual and sudden environmental changes are resulting in substantial human movement and displacement, and the scale of such flows, both internal and cross-border, is expected to rise with unprecedented impacts on lives and livelihoods. Despite the potential challenge, there has been a lack of strategic thinking about this policy area partly due to a lack of data and empirical research on this topic. Adequately planning for and managing environmentally induced migration will be critical for human security. The papers in this volume were first presented at the Research Workshop on Migration and the Environment: Developing a Global Research Agenda held in Munich, Germany in April 2008. One of the key objectives on the Munich workshop was to address the need for more sound empirical research and identify priority areas of research for policy makers in the field of migration and the environment.

**Climate-smart Agriculture Sourcebook** Food and Agriculture Organization (FAO), 2014 Climate-smart agriculture, forestry and fisheries (CSA), contributes to the achievement of sustainable development goals. It integrates the three dimensions of sustainable development (economic, social and environmental) by jointly addressing food security and climate challenges. It is composed of three main pillars: sustainably increasing agricultural productivity and incomes; adapting and building resilience to climate change; reducing and/or removing greenhouse gases emissions, where possible. The purpose of the sourcebook is to further elaborate the concept of CSA and demonstrate its potential, as well as limitations. It aims to help decision makers at a number of levels (including political administrators and natural resource managers) to understand the different options that are available for planning, policies and investments and the practices that are suitable for making different agricultural sectors, landscapes and food systems more climate-smart. This sourcebook is a reference tool for planners, practitioners and policy makers working in agriculture, forestry and fisheries at national and subnational levels. -- Back cover.

**Renewable Energy Desalination** Bekele Debele Negewo, 2012-09-26 The book looks at water availability and water demand in various sectors till 2050, presenting a methodology to prioritize options both on the demand and on the supply side, with a special focus on renewable energy desalination.

**Women's Rights in the Middle East and North Africa** Sanja Kelly, Julia Breslin, 2010-07-16 Freedom House  
An innovative publication *Women's Rights in the Middle East and North Africa: Progress Amid Resistance* analyzes the status of women in the region, with a special focus on the gains and setbacks for women's rights since the first edition was released in 2005. The study presents a comparative evaluation of conditions for women in 17 countries and one territory: Algeria, Bahrain, Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Palestine (Palestinian Authority and Israeli-Occupied Territories), Qatar, Saudi Arabia, Syria, Tunisia, United Arab Emirates, and Yemen. The publication identifies the causes and consequences of gender inequality in the Middle East, and provides concrete recommendations for national and international policymakers and implementers. Freedom House is an independent nongovernmental organization that supports democratic change, monitors freedom, and advocates for democracy and human rights. The project has been embraced as a resource not only by international players like the United Nations and the World Bank, but also by regional women's rights organizations, individual activists, scholars, and governments worldwide. Women's rights in each country are assessed in five key areas: (1) Nondiscrimination and Access to Justice; (2) Autonomy, Security, and Freedom of the Person; (3) Economic Rights and Equal Opportunity; (4) Political Rights and Civic Voice; and (5) Social and Cultural Rights. The methodology is based on the Universal Declaration of Human Rights, and the study results are presented through a set of numerical scores and analytical narrative reports.

**The Uninhabitable Earth** David Wallace-Wells, 2019-02-19 #1 NEW YORK TIMES BESTSELLER • “The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon.”—Andrew Solomon, author of *The Noonday Demon* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New Yorker • The New York Times Book Review • Time • NPR • The Economist • The Paris Review • Toronto Star • GQ • The Times Literary Supplement • The New York Public Library • Kirkus Reviews It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An “epoch-defining book” (The Guardian) and “this generation’s *Silent Spring*” (The Washington Post), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today’s.

LONGLISTED FOR THE PEN/E.O. WILSON LITERARY SCIENCE WRITING AWARD “The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet.”—Farhad Manjoo, *The New York Times* “Riveting. . . . Some readers will find Mr. Wallace-Wells’s outline of possible futures alarmist. He is indeed alarmed. You should be, too.”—*The Economist* “Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the ‘eerily banal language of climatology’ in favor of lush, rolling prose.”—Jennifer Szalai, *The New York Times* “The book has potential to be this generation’s *Silent Spring*.”—*The Washington Post* “The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book.”—Alan Weisman, *The New York Review of Books*

**Climate Change and Land** Groupe d'experts intergouvernemental sur l'évolution du climat, 2019

*World Inequality Report 2022* Lucas Chancel, Thomas Piketty, Emmanuel Saez, Gabriel Zucman, 2022-11-01 Produced by a team of world-leading economists, this is the benchmark account of recent and historical trends in inequality. *World Inequality Report 2022* is the most authoritative and comprehensive account available of global trends in inequality. Researched, compiled, and written by a team of world-leading economists, the report builds on the pioneering edition of 2018 to provide policy makers and scholars everywhere up-to-date information about an ever broader range of countries and about forms of inequality that researchers have previously ignored or found hard to trace. Over the past decade, inequality has taken center stage in public debate as the wealthiest people in most parts of the world have seen their share of the economy soar relative to that of others. The resulting political and social pressures have posed harsh new challenges for governments and created a pressing demand for reliable data. The World Inequality Lab, housed at the Paris School of Economics and the University of California, Berkeley, has answered this call by coordinating research into the latest trends in the accumulation and distribution of income and wealth on every continent. This new report not only extends the lab’s international reach but provides crucial new information about the history of inequality, gender inequality, environmental inequalities, and trends in international tax reform and redistribution. *World Inequality Report 2022* will be a key document for anyone concerned about one of the most imperative and contentious subjects in contemporary politics and economics.

**Small-scale Aquaponic Food Production** Christopher Somerville, Food and Agriculture Organization of the United Nations, 2015 This technical paper begins by introducing the concept of aquaponics, including a brief history of its development and its place within the larger category of soil-less culture and modern agriculture. It discusses the main theoretical concepts of aquaponics, including the nitrogen cycle and the nitrification process, the role of bacteria, and the concept of balancing an aquaponic unit. It then moves on to cover important considerations of water quality parameters,

water testing, and water sourcing for aquaponics, as well as methods and theories of unit design, including the three main methods of aquaponic systems: media beds, nutrient film technique, and deep water culture. The publication discusses in detail the three groups of living organisms (bacteria, plants and fish) that make up the aquaponic ecosystem. It also presents management strategies and troubleshooting practices, as well as related topics, specifically highlighting local and sustainable sources of aquaponic inputs. The publication also includes nine appendixes that present other key topics: ideal conditions for common plants grown in aquaponics; chemical and biological controls of common pests and diseases including a compatible planting guide; common fish diseases and related symptoms, causes and remedies; tools to calculate the ammonia produced and biofiltration media required for a certain fish stocking density and amount of fish feed added; production of homemade fish feed; guidelines and considerations for establishing aquaponic units; a cost-benefit analysis of a small-scale, media bed aquaponic unit; a comprehensive guide to building small-scale versions of each of the three aquaponic methods; and a brief summary of this publication designed as a supplemental handout for outreach, extension and education.

*Vulnerability and Adaptation to Climate Change* Joel B. Smith, United States Country Studies Program, 1996-06-30 To assist developing countries and countries with economies in transition to meet this obligation, the U.S. Country Studies Program is providing technical and financial support for the development of climate change studies in 55 countries. This document presents preliminary results from the vulnerability and adaptation assessment research of 13 of the countries that were ready to share their results. The countries contributing to this document are from the African, Asian-Pacific, Eastern European, and Latin American regions, and their assessments address impacts in the agriculture, grasslands, forest, water resources, and coastal resources sectors. This document includes results from many countries for which there was no prior research on the potential impacts of climate change, or for which the research has not previously been widely available. This work will not only fill gaps in the understanding of the potential impacts of climate change and the effectiveness of adaptation strategies, it will also help develop a consensus on appropriate methodologies and needs for refinement to currently available methodologies.

*Health of People, Health of Planet and Our Responsibility* Wael Al-Delaimy, Veerabhadran Ramanathan, Marcelo Sánchez Sorondo, 2020-05-13 This open access book not only describes the challenges of climate disruption, but also presents solutions. The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on climate change has been established through extensive published evidence and reports. However, the connections between climate change, the health of the planet and the impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led to new

weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem. The solutions and actions we explore in this book engage diverse sectors of civil society, faith leadership, and political leadership, all oriented by ethics, advocacy, and policy with a special focus on poor and vulnerable populations. The book highlights areas we think will resonate broadly with the public, faith leaders, researchers and students across disciplines including the humanities, and policy makers.

*Global Renewables Outlook: Energy Transformation 2050* International Renewable Energy Agency IRENA, 2020-04-01 This outlook highlights climate-safe investment options until 2050, policies for transition and specific regional challenges. It also explores options to eventually cut emissions to zero.

*NATO, Climate Change, and International Security* Tyler H. Lippert, 2019-05-11 This book offers a prospective analysis of the anticipated security consequences of climate change in relation to the North Atlantic Treaty Organization (NATO). Using climate and security literature to complement recent foresight and scenario analysis developed by NATO, the author applies the International Risk Governance Council's (IRGC) Risk Governance Framework to identify the considerations and actions that could assist NATO in a context where climate and environmental factors more intensively shape security. Tyler Lippert explores how climate change has the potential to increase the need for humanitarian assistance and disaster response, to create tension over shared resources, to renew and enhance geo-political interest in the Arctic, and to deepen concern with respect to the Middle East and North Africa (MENA). Within this new political and environmental reality, NATO must consider how to adapt to meet new demands, prepare for new security challenges, as well as manage unforeseen consequences. Offering a corrective, this book identifies near-term actions for NATO to improve its risk governance posture, providing a basis upon which longer-range policy considerations can be developed. This analysis is only the opening salvo of what is likely to be a complicated process that spans many years, if not decades. However, in mapping the risk governance dimensions to the security and climate nexus from the perspective of NATO, Lippert provides a foundation for risk-based policy planning for NATO. The book will be of immense value to policy and decision makers: NATO leadership and its affiliated organizations as well as to academics across a broad span of subject areas, particularly environmental sociology, defense and foreign policy, and the political sciences.

*Climate Change and Cities* Cynthia Rosenzweig, William D. Solecki, Patricia Romero-Lankao, Shagun Mehrotra, Shobhakar Dhakal, Somayya Ali Ibrahim, 2018-03-29 Climate Change and Cities bridges science-to-action for climate change adaptation and mitigation efforts in cities around the world.

*Achieving the Paris Climate Agreement Goals* Sven Teske, 2019-02-01 This open access book presents detailed pathways to achieve 100% renewable energy by 2050, globally and across ten geographical regions. Based on state-of-the-art scenario modelling, it provides the vital missing link between renewable energy targets and the measures needed to achieve them. Bringing together the latest research in climate science, renewable energy technology, employment and resource impacts, the book breaks new ground by covering all the elements essential to achieving the ambitious climate mitigation targets set out in the Paris Climate Agreement. For example, sectoral implementation pathways, with special emphasis on differences between developed and developing countries and regional conditions, provide tools to implement the scenarios globally and domestically. Non-energy greenhouse gas mitigation scenarios define a sustainable pathway for land-use change and the agricultural sector. Furthermore, results of the impact of the scenarios on employment and mineral and resource requirements provide vital insight on economic and resource management implications. The book clearly demonstrates that the goals of the Paris Agreement are achievable and feasible with current technology and are beneficial in economic and employment terms. It is essential reading for anyone with responsibility for implementing renewable energy or climate targets internationally or domestically, including climate policy negotiators, policy-makers at all levels of government, businesses with renewable energy commitments, researchers and the renewable energy industry.

*Gender and Development in the Middle East and North Africa* World Bank, 2004

**The Road Not Traveled** Ahmed Galal, 2008 Education is a powerful force that can speed up economic growth, improve income distribution, facilitate social mobility, and reduce poverty. It can also improve the quality of life for citizens by contributing to longer life expectancy, lower fertility and infant mortality rates, and a more cohesive national identity. However, none of these positive outcomes are automatic. All too often, investment in education generates low returns to the individuals involved and society at large. Thus, while investment in education is a necessary condition for faster development and prosperity, it is by no means sufficient. This MENA flagship report explores whether past investments in education in the region have generated their maximum economic returns, and, if not, why they have failed to do so. Ultimately, the answers to these questions are being sought to help policymakers chart more fruitful strategies in the future. -- Overview (p. 1).
