RAF Wings over Florida Will Largent,2020-08-01 From 1941 through 1945, British cadets in the Royal Air Force trained in the United States through the Lend-Lease Act, President Roosevelt's ingenious plan to help beleaguered Great Britain while maintaining the semblance of neutrality. This book tells the saga of two Florida training fields during this turbulent time. In their own words, British pilots tell of their Florida experiences. Many of them still in their late teens, away from home for the first time, pale and thin from years of rationing, these young men encountered immense challenges and overwhelming generosity during their training in Florida. Now retired, these former pilots still smell the scent of orange blossoms when they glance through the log books they kept while flying their Stearmans and Harvards over Florida citrus groves. They fondly remember the times when they buzzed over the homes of their Florida "families" to let them know to expect them for Sunday dinner. More than fifty years later, their stories still resonate with universal emotions: fear of failure, love of country, camaraderie, romantic love, and the pain of tragic deaths. Their stories also remind the American reader of a unique time in our history, when, poised on the brink of war, the United States reached out to help a country in distress.

The Inspectors General of the United States Army, 1777-1903 David A. Clary,Joseph W. A. Whitehorne,1987 A study of the establishment of inspection practices in the United States Army told chronologically, in large part through the experiences of officers assigned to the inspection service. The record of the inspectorate illustrates those daily concerns that influenced the institutional development of the Inspector General Corps as a whole.

Semantic Cognition Timothy T. Rogers,James L. McClelland,2004 A mechanistic theory of the representation and use of semantic knowledge that uses distributed connectionist networks as a starting point for a psychological theory of semantic cognition.

Doing Without Concepts Edouard Machery,2009-02-27 In *Doing without Concepts*, Edouard Machery argues that the dominant psychological theories of concept fail to provide a coherent framework to organize our extensive empirical knowledge about concepts. Machery proposes that to develop such a framework, drastic conceptual changes are required.

Metacognition Patrick Chambres,Marie Izaute,Pierre-Jean Marescaux,2002-08-31 The object of this volume is to promote

the interaction, and indeed construct a synergistic reciprocity between the functional perspective on metacognition and the analytical perspective. The authors examine the role of metacognition in activities as varied as classroom learning, piloting airplanes, and eyewitness testimony. The ideas and questions developed in the book will give a dynamic impulse to research in the field.

Understanding Reading Frank Smith, 2004-05-20 Understanding Reading revolutionized reading research and theory when the first edition appeared in 1971 and continues to be a leader in the field. In the sixth edition of this classic text, Smith's purpose remains the same: to shed light on fundamental aspects of the complex human act of reading--linguistic, physiological, psychological, and social--and on what is involved in learning to read. The text critically examines current theories, instructional practices, and controversies, covering a wide range of disciplines but always remaining accessible to students and classroom teachers. Careful attention is given to the ideological clash that continues between whole language and direct instruction and currently permeates every aspect of theory and research into reading and reading instruction. To aid readers in making up their own minds, each chapter concludes with a brief statement of Issues. Understanding Reading: A Psycholinguistic Analysis of Reading and Learning to Read, Sixth Edition is designed to serve as a handbook for language arts teachers, a college text for basic courses on the psychology of reading, a guide to relevant research on reading, and an introduction to reading as an aspect of thinking and learning. It is matchless in integrating a wide range of topics relative to reading while, at the same time, being highly readable and user-friendly for instructors, students, and practitioners.

The Rucksack War Edgar F. Raines, 2011-01 Profusely illustrated with full color maps and photographs. Center of Military History Publication number CMH 55-2. Contingency operations series. Second volume in the U.S. Army Center of Military History's Contingency Operations Series, provides an account of how Army logistics affected ground operations during the Grenada intervention and, in turn, how combat influenced logistical performance. Emphasizes the role of individuals and the decisions they made based on the necessarily incomplete and sometimes misleading information available at the time during an unexpected and short-notice contingency operation.

Compositionality and Concepts in Linguistics and Psychology James A. Hampton, Yoad Winter, 2017-09-19 By highlighting relations between experimental and theoretical work, this volume explores new ways of addressing one of the central challenges in the study of language and cognition. The articles bring together work by leading scholars and younger researchers in psychology, linguistics and philosophy. An introductory chapter lays out the background on concept

composition, a problem that is stimulating much new research in cognitive science. Researchers in this interdisciplinary domain aim to explain how meanings of complex expressions are derived from simple lexical concepts and to show how these meanings connect to concept representations. Traditionally, much of the work on concept composition has been carried out within separate disciplines, where cognitive psychologists have concentrated on concept representations, and linguists and philosophers have focused on the meaning and use of logical operators. This volume demonstrates an important change in this situation, where convergence points between these three disciplines in cognitive science are emerging and are leading to new findings and theoretical insights. Charles-Edouard Brown-Séquard Louis-Cyril Celestin, 2013-11-19 Genius and dilettantism often go hand in hand. Nowhere is this truer than in the life of Charles-Edouard Brown-Séquard, the bilingual physician and neurologist who succeeded Claude Bernard as the Chair of Experimental Medicine at the College de France in Paris after having practiced in Paris, London and in the USA, especially in Harvard. For most men, making one discovery of global importance would have sufficed to satisfy their curiosity and self-image. Not so Brown-Séquard. His explanation of the neurological disparity following the hemi-section of the spinal cord was a unique achievement that added his name to the syndrome and made him immortal. Yet, the demons of his mind tormented him in his endless search for medical truths and drove him to explore other phenomena, seeking to explain and remedy them. This unique biography shows for the first time the conflict between his professional and personal life, and should appeal to all students of medical history and psychology.

Talking the Talk Trevor A. Harley, 2017-02-02 Talking the Talk provides a comprehensive introduction to the psychology of language, written for the reader with no background in the field or any prior knowledge of psychology. Written in an accessible and friendly style, the book answers the questions people actually have about language; how do we speak, listen, read, and learn language? The book advocates an experimental approach, explaining how psychologists can use experiments to build models of language processing. Considering the full breadth of psycholinguistics, the book covers core topics including how children acquire language, how language is related to the brain, and what can go wrong with it. Fully updated throughout, this edition also includes: Additional coverage on the genetics of language Insight into potential cognitive advantages of bilingualism New content on brain imaging and neuroscience Increased emphasis on recursion and what is special about language Talking the Talk is written in an engaging style which does not hesitate to explain complex concepts. It is essential reading for all undergraduate students and those new to the topic, as well as the interested lay reader.

Seventeen trips through Somáliland H. G. C. Swayne, 2022-09-15 In the intervening years, between 1884 and 1893, professional duties necessitated my undertaking several journeys in Somáliland, with the object of exploration. In the intervals between these journeys, the author devoted his periods of leave to hunting in that country. During a period of nine

years he undertook seventeen separate journeys to the interior, and so became familiar with the chief elements of interest to be found there. The author's principal object in writing this book is to present phases of life in nomadic North-East Africa, and to supply detailed information of a nature that might prove useful to travelers and sportsmen who wish to visit that country. As the author and his brother have always been pioneering, the men who have followed in our footsteps have naturally had better opportunities for sport than we had, and the author only gives such of my more successful sporting experiences as will assist me in my main object of giving a general portrait of the country.

Culinary Linguistics Cornelia Gerhardt, Maximiliane Frobenius, Susanne Ley, 2013-07-04 Language and food are universal to humankind. Language accomplishes more than a pure exchange of information, and food caters for more than mere subsistence. Both represent crucial sites for socialization, identity construction, and the everyday fabrication and perception of the world as a meaningful, orderly place. This volume on Culinary Linguistics contains an introduction to the study of food and an extensive overview of the literature focusing on its role in interplay with language. It is the only publication fathoming the field of food and food-related studies from a linguistic perspective. The research articles assembled here encompass a number of linguistic fields, ranging from historical and ethnographic approaches to literary studies, the teaching of English as a foreign language, psycholinguistics, and the study of computer-mediated communication, making this volume compulsory reading for anyone interested in genres of food discourse and the linguistic connection between food and culture.
