*Athenian Vase Construction* Toby Schreiber, 1999-05-27 Based on her study of Greek pottery sherds and vases and on her profound hands-on knowledge of pottery construction techniques, including experiments with the potting of Attic shapes, Toby Schreiber describes how ancient Greek potters constructed their vases. Drawn in large part from vases and fragments in the collection of the Getty Museum, the many photographs that accompany the text show how much even seemingly insignificant sherds may reveal about technique when studied by someone knowledgeable about potting. The drawings - all done by the author - demonstrate step by step with admirable clarity how the potter executed his craft. Written by a master potter, this is a book both for those who know little or nothing about potting techniques and for those who already have an understanding of these matters.

**Picenum and the Ager Gallicus at the Dawn of the Roman Conquest** Federica Boschi, Enrico Giorgi, Frank

Vermeulen,2020-11-05 This volume presents a coherent collection of papers presented at an International Workshop (held in Ravenna, 13-14 May 2019) which focussed on the transition between Italic culture and Romanised society in the central Adriatic area – the regions ager Gallicus and Picenum under Roman dominance – from the fourth to the second centuries BCE.

Hard Sell Colin Clark,2014-08-01 Market pitchers routinely transform a patch of bare ground into a sea of eager purchasers using little more than their 'gift of the gab' and some homespun 'psychology' to convince passers-by to stop and buy their goods. Employing some of the world's most successful selling techniques, in one of the oldest and most difficult of all marketing situations, their rhetoric and social skills have to equal that employed by the most accomplished salespersons, politicians and professional persuaders. Between 1984 and 1994 sociologists Clark and Pinch recorded over 75 pitching routines on street markets and other sales sites throughout the UK, mainland Europe and the United States. Using examples of pitchers attracting a crowd, describing and demonstrating their goods, building bargains, cajoling the unconvinced to make a purchase and coping with problem customers, the authors reveal, for the very first time, the reasons for these traders' extraordinary success-both on and away from the markets. Comparing their findings with more orthodox sales situations-direct response TV home shopping and infomercials, as well as other forms of grass-roots selling (fly pitching, the mock auction sales con, street entertaining and urban 'hustling')-the authors highlight many important lessons that have relevance for everyone involved in all types of marketing, advertising and persuasion.In this revised, updated and extended edition the authors also reveal why, today, pitching on markets appears to have become a dying art. Original, authoritative and highly readable, The Hard Sell is an essential and often hilarious guide for anyone who wants to understand how real-life selling really works.

**Design by Numbers** John Maeda,2001-08-24 A pioneering graphic designer shows how to use the computer as an artistic medium in its own right. Most art and technology projects pair artists with engineers or scientists: the artist has the conception, and the technical person provides the know-how. John Maeda is an artist and a computer scientist, and he views the computer not as a substitute for brush and paint but as an artistic medium in its own right. Design By Numbers is a reader-friendly tutorial on both the philosophy and nuts-and-bolts techniques of programming for artists. Practicing what he preaches, Maeda composed Design By Numbers using a computational process he developed specifically for the book. He introduces a programming language and development environment, available on the Web, which can be freely downloaded or run directly within any JAVA-enabled Web browser. Appropriately, the new language is called DBN (for design by numbers). Designed for visual people—artists, designers, anyone who likes to pick up a pencil and doodle—DBN has very few commands

and consists of elements resembling those of many other languages, such as LISP, LOGO, C/JAVA, and BASIC. Throughout the book, Maeda emphasizes the importance—and delights—of understanding the motivation behind computer programming, as well as the many wonders that emerge from well-written programs. Sympathetic to the mathematically challenged, he places minimal emphasis on mathematics in the first half of the book. Because computation is inherently mathematical, the book's second half uses intermediate mathematical concepts that generally do not go beyond high-school algebra. The reader who masters the skills so clearly set out by Maeda will be ready to exploit the true character of digital media design.
