Agent-Mediated Electronic Commerce and Trading Agent Design and Analysis John Collins, Peyman Faratin, Simon D. Parsons, Juan A. Rodriguez-Aguilar, Norman M. Sadeh, Onn Shehory, Elizabeth Sklar, 2008-10-20 This book constitutes the thoroughly refereed post-conference proceedings of the 9th International Workshop on Agent-Mediated Electronic Commerce, AMEC IX, co-located with the Sixth International Joint Conference on Autonomous Agents and Multiagent Systems, AAMAS 2007, held in Honolulu, Hawaii, in May 2007, and the 5th Workshop on Trading Agent Design and Analysis, TADA 2007, co-located with the Twenty-Second AAAI Conference on Artificial Intelligence, AAAI 2007, held in Vancouver, Canada, in July 2007. This volume presents 15 carefully revised and selected papers from these workshops. The primary and complementary goal of both workshops was to continue to bring together novel work from diverse fields on modeling, implementation and evaluation of computational trading institutions and/or agent strategies. The papers originating from AMEC focus on a large variety of issues on auctions, negotiation, and strategic behavior in electronic marketplaces. The papers originating from TADA reflect the effort of the community to design scenarios where trading agent designers and market designers can be pitched against one another.

High Temperature Electronics F. Patrick McCluskey,Thomas Podlesak,Richard Grzybowski,2018-05-04 The development of electronics that can operate at high temperatures has been identified as a critical technology for the next century. Increasingly, engineers will be called upon to design avionics, automotive, and geophysical electronic systems requiring components and packaging reliable to 200 °C and beyond. Until now, however, they have had no single resource on high temperature electronics to assist them. Such a resource is critically needed, since the design and manufacture of electronic components have now made it possible to design electronic systems that will operate reliably above the traditional temperature limit of 125 °C. However, successful system development efforts hinge on a firm understanding of the fundamentals of semiconductor physics and device processing, materials selection, package design, and thermal management, together with a knowledge of the intended application environments. High Temperature Electronics brings together this essential information and presents it for the first time in a unified way. Packaging and device engineers and technologists will find this book required reading for its coverage of the techniques and tradeoffs involved in materials selection, design, and thermal management and for its presentation of best design practices using actual fielded systems as examples. In addition, professors and students will find this book suitable for graduate-level courses because of its detailed level of explanation and its coverage of fundamental scientific concepts. Experts from the field of high temperature electronics have contributed to nine chapters covering topics ranging from semiconductor device selection to testing and final assembly.

Preparing for Electronic Commerce in Asia Douglas Bullis,1999-02-28 Just as the crash of 1929 did not presage the downfall of the United States, neither will the economic crisis of 1997 mean the end of the rise of Asia and the Pacific Rim.

Leading them out of a temporary setback, says Bullis, will be the new high-tech sectors of their economies: information services, communication technology, and electronic delivery systems such as e-commerce and e-business. His book is thus a non-technical look at the state of information technology (IT) and how people in the emerging Asia marketplace are thinking about it, especially in places like Singapore and Malaysia, the only two countries in the region pursuing the sorts of large-scale information infrastructure projects that will eventually determine the region's long term commerce in IT. Not a state of the technology book but a state of the mindset book, it offers businesspeople worldwide an important understanding of this vast and burgeoning market for their products and services, insights that will help decision makers recognize the big mistakes they can make before they make them. An important and fascinating study for executives in all industries that hope to do business in the still vital Asian market. Bullis makes clear that a great deal of investment money and corporate prestige can be wasted if companies attempt to enter the Asia information technology (IT) services arena with no clear idea of what IT wants. Overseas firms often assume that their potential clients think the way they think and have the same needs. This is especially true, he says, with the sorts of decision makers who assume that marketplace forces alone condition investment decisions. But Asia is not a marketplace; it is a cultureplace. Basic issues, such as freedom of expression, the social utility of information, who should benefit from commerce, and the structure of organizations—all these are viewed differently in Asia. Bullis' book explains just what the mindset of the region is, largely in the words of Asia's IT movers and shakers and those who are rising in the economy to become tomorrow's leaders and influentials, precisely the people with whom their counterparts elsewhere will soon have to deal. Readers will find not only a much better understanding of the kinds of services they should be offering, but how to tailor those services and their delivery systems to local realities.

Pricing for Profitability John L. Daly, 2002-07-15 Three things can happen when establishing a product price. A price set too high is a lost sale that could have been profitable at a lower price. A price set too low is rewarded with unprofitable work. Only when a price is set appropriately does a company make both a sale and a profit. Just as activity-based costing and activity-based management revolutionized the cost accounting world, activity-based pricing will bring a disciplined approach to developing pricing. Activity-based pricing examines the relationships between price, cost and sales volume and how this relationship effects profitability. Pricing for Profitability joins the disciplines of marketing, economics, business strategy, engineering and cost accounting to achieve maximum profitability.

Key Concepts in Business Practice Jonathan Sutherland, 2017-03-14 Key Concepts in Business Practice is one of a range of comprehensive glossaries with entries arranged alphabetically for easy reference. More complex terminology is made clearer with numerous diagrams and illustrations. With over 500 key terms

defined, the book represents a comprehensive must-have reference for anyone studying a business-related course or those simply wishing to understand what business practice is all about. It will be especially useful as a revision aid.

WEIZAC: An Israeli Pioneering Adventure in Electronic Computing (1945-1963) Leo Corry, Raya Leviathan, 2019-08-16 The book tells the unique story of WEIZAC, an early computer built by a “new nation” in the early 1950s. It was created in Israel, even though the feasibility of this project was actually close to null when it was initially conceived, in 1946, and, unlike most of the early computer projects, was privately financed mainly by the Jewish world community. The book draws on a wealth of documents and historical insights to reveal the processes and powers that led to the successful completion of the project and, as well as its actual impact on scientific activities in Israel, and on the rise of a local computing community. Based on archival data, the book shows how a synergy of personal dedication together with an organizational and national mission that links the Zionist vision with science and technology for the Jewish people helped to achieve a well-defined goal. The book offers intriguing insights and refreshing perspectives to all readers interested in the Zionist movement or in the history of computing.
